

STOP THE BRADFORD BYPASS

The Ontario government is immediately moving ahead with construction of a 4 lane highway before completing an updated environmental assessment!

- The outdated environmental assessment which this project is based upon is **24 years old**, and doesn't consider the Greenbelt Plan, the Lake Simcoe Protection Plan or a Climate Change Impact Assessment.
- Alternate regional road options **were not** considered.
- Very large, elevated bridges are required to cross the Holland River, which will create **pollution and non-stop noise** from transport trucks 24/7.
- Water is a serious issue in the area. Residents are concerned about the impact of the highway on their wells and **increased pollution** on Lake Simcoe.
- Construction along the proposed path will **permanently destroy the Aboriginal, Anglophone and Francophone cultural heritage** site located at the Lower Landing, Lot 118 on Yonge Street.
